

Single-Hung Windows

advancedwindowsusa.com/single-hung-windows

As a homeowner in Utah, you have many different window styles to choose from. **The type of window you choose may depend on your own personal preferences, your budget, the style you find best matches your home's design, and how much air flow you want inside of your home.** [Advanced Window Products](#), a company with many years of experience and countless happy and returning clients, can definitely help you find the window that is most suitable for you. We take pride in offering some of the best windows on the market.

What are Single-Hung Windows

A single-hung window is a type of single slider window that is raised up from the bottom to allow air inside. The top portion of the window remains intact and because the bottom portion and only the bottom portion moves up and stays up, it is called a single-hung window.

Single-hung windows are what you'll typically find in modern homes that were constructed recently. **They are very well-suited for traditional style homes.** Originally, you would find them in Victorian and Georgian houses. Now, they mesh well with nearly any type of home.

Single-hung windows are often compared to [double-hung windows](#), which are their main counterpart. Double-hung windows are different in the sense that they can be opened from the bottom and also lowered from the top. In other words, both the top sash and the bottom sash can move up or down, which means you can get much more ventilation. In addition, double-hung windows can also tilt inward, making them very easy to clean from the inside of your home. **Single-hung windows do not tilt.**

Benefits of Single-Hung Windows

There are multiple benefits to having single-hung windows as opposed to many other windows, particularly the double-hung window. Let's list some of these benefits:

- Typically 10 – 20% less expensive than double-hung windows.
- Better insulation in relation to the double-hung window.
- Easy cleaning if the single-hung window is on the first floor.
- The glass is insulated.
- Resists air and water penetration.
- The screen does not rattle.

- Energy efficient.
- Durability.
- Can be custom fit for your home.

The overall benefits of single-hung windows are that ***they offer a less expensive alternative to double-hung windows with lots of ventilation to help keep your home cool*** with a breeze of air coming in during the hotter summer season.
